

PRODUCT UPDATE:

ALLIGATOR SENS.IT RS TPMS NOW COVERS EARLY-MODEL CHRYSLER VEHICLES

Alligator sens.it RS universal TPMS sensors now cover early-model Chrysler vehicles with 433 MHz systems (2002-04 Chrysler 300M, 2002-03 Dodge Caravan, 2002-04 Jeep Grand Cherokee, etc).

The vehicles are among the very first models that came equipped with TPMS so the reach of Alligator sens.it coverage continues to grow.

The vehicle applications are part of Wegmann's process of continually adding value to the sens.it RS sensor line, even for older models, making them the most universal sensor on the market. Any shop that is having trouble finding replacement TPMS sensors due to the OE parts being discontinued can now use Alligator sens.it RS sensors for the vehicles. Keeping Alligator sensors in-stock means less trips to the parts store to obtain sensors for special vehicles.

For sensor ID registration, the OE sensors are activated magnetically but technicians can use a TPMS tool to learn the sens.it sensors to the vehicles.

Shops that stock Alligator sens.it RS sensors are utilizing user-friendly TPMS units which make the techs' jobs easier, reduces unnecessary downtime in the bays for TPMS learning or sensor issues, helps the business' bottom line, and keeps its customers happy and coming back. Wegmann will continue to add value to the RS series TPMS sensors from Alligator by adding coverage for new vehicle applications and features so that the product never goes obsolete.

Regardless of the tool that's used to program the sensors, these vehicles should be available for programming after completing the latest update.

sens.it®
It Just Makes Sense.
