

PRODUCT UPDATE: **ALLIGATOR SENS.IT RS-SERIES TPMS COVERS DODGE DART VEHICLES**

Alligator sens.it RS & RS+ universal TPMS sensors now cover the 2013-16 Dodge Dart. The vehicle's TPMS system has an advanced auto-learning feature - the sensors work with the ABS system to automatically learn new sensor IDs (when installing new sensors) and automatically locate existing IDs (when rotating tires).

If no OBD tool is available for sensor-ID registration, then techs can simply park the car for 20 minutes then drive until it recognizes the new sensors or new locations.

Shops that stock Alligator sens.it RS sensors are utilizing user-friendly TPMS units which make the techs' jobs easier, reduces unnecessary downtime in the bays for TPMS learning or sensor issues, helps the business' bottom line, and keeps its customers happy and coming back. Wegmann will continue to add value to the RS series TPMS sensors from Alligator by adding coverage for different vehicle applications so that the product never goes obsolete.

When replacing OEM sensors with aftermarket units, rest assured that RS series TPMS sensors from Alligator will provide all the functionality the vehicle delivers!

Regardless of the tool that's used to program the sensors, these vehicles should be available for programming after completing the latest update

sens.it®
It Just Makes Sense.
