

PRODUCT UPDATE: **ALLIGATOR SENS.IT RS-SERIES TPMS COVERS GEN3 NISSAN ROGUE**

Alligator sens.it RS & RS+ universal TPMS sensors now cover the third-generation Nissan Rogue (2021-22MY). The car used 433 MHz sensors for model years 2014-20 but it switched to 315 MHz for 2021.

The vehicle is another example of Nissan's recent trend toward automatic learning - if no OBD tool is available for ID registration, then techs can simply drive the car until it recognizes the new sensors. OBD-learning is also supported.

Shops that stock Alligator sens.it RS sensors are utilizing user-friendly TPMS units which make the techs' jobs easier, reduces unnecessary downtime in the bays for TPMS learning or sensor issues, helps the business' bottom line, and keeps its customers happy and coming back. Wegmann will continue to add value to the RS series TPMS sensors from Alligator by adding coverage for different vehicle applications so that the product never goes obsolete.

When replacing OEM sensors with aftermarket units, rest assured that RS series TPMS sensors from Alligator will provide all the functionality the vehicle delivers!

Regardless of the tool that's used to program the sensors, these vehicles should be available for programming after completing the latest update.
